Day 3/71

At the end of today's lesson you will;

- Give students more practice observing like a paleontologist and to help them begin to connect differences in structures to differences in environment, an idea that will continue to be developed throughout the chapter.

Classwork-

- **Evolutionary History 2.1**
- Today, Students begin to focus on understanding why the bone structures that are shared between different species can look very different.
- They are reminded that paleontologists make careful observations, and they practice this skill during today's lesson.
- Students work with a partner to closely observe the front limbs of three different species: the dire wolf, the fruit bat, and Titanotylopus.

Homework-

- Section 2.1 Homework.
- Study the [Evolutionary History Vocabulary on Quizlet](#).
