

Natural Selection

Next Generation Science Standards

Dec. 3, 2018

Day 4/60

At the end of today's lesson you will;

- Design a malaria treatment that minimizes drug-resistant malaria.

Classwork-

- Natural Selection Engineering Internship Day 8
- Interns receive and process feedback from the project director about the evidence they included in their outlines of the design decisions. After discussing the feedback with their colleagues, interns learn more about how scientists and engineers communicate information professionally. They then spend the rest of the day working on the Design Decisions paragraphs. Using their outlines, the Proposal Rubric, and the project director's feedback as a guide, they write a convincing argument for why their design is optimal. Interns focus on how the decisions they made about the design features led to the final results of their optimal design.

Homework-

- Complete today's "After Hours" work.
