

Force and Motion

Feb. 5, 2020

Day 1/97

At the end of today's lesson you will be able to determine;

- How do forces affect motion?

Classwork-

- Force and Motion 4.2
- Students participate in a Science Seminar to apply their knowledge of force, velocity, and mass as they discuss why a collision scene in a movie differed from a film student's attempt to replicate that scene. Students prepare for the seminar by making an argument about the claim they think is better supported by evidence and present it to a partner.
- They then participate in the Science Seminar, a group discussion in which students make sense of evidence and debate the claims. The purpose of this lesson is to provide structured practice with oral scientific argumentation, as well as a final opportunity for students to apply the science concepts of the unit to a specific question, before composing a written argument in the following lesson.

Homework-

- End of unit assessment FRIDAY.
- Bring in your Snow-Tubing Trip Form and Money.
