

FORCE AND MOTION ENGINEERING INTERNSHIP

Feb. 19, 2020

Day 1/105

At the end of today's lesson you will be able to determine;

- How do forces affect motion?

Classwork-

- **Period 1** - FMEI Day #4
- Interns begin the Design phase of the project by researching the materials and options available for their supply pod designs, and then watch a tutorial video on how to use the Design Tool.
- They perform iterative tests in the Futura SupplyDrop Design Tool, moving through The Design Cycle phases—they plan, build, test, and analyze each version of their supply pods designs.
- After hours, interns reflect on the project itself and complete a Project Summary.
- The purpose of these activities is to give interns structured practice with iterative testing as well as to review the project criteria.

Homework-

- Finish up your Day#4 "After-Hours" work.
